WORK EXPERIENCE

Jan 2024 — Present

Full stack Developer - Karpadu

I worked on building a modern car rental platform using Next.js and Tailwind CSS.

Developed and optimized responsive UI components, ensuring strong performance, accessibility, and SEO across devices.

Collaborating closely with backend developers, I integrated dynamic APIs and contributed to shaping the overall user experience.

My main focus was delivering a smooth, mobile-friendly booking process and maintaining clean, scalable code aligned with modern React and Next.js best practices.

May 2022 — Jul 2023

Full stack developer - Freelancer

Heraklion

As a Junior Full Stack Developer working as a freelancer, I collaborated with clients to design, build, and maintain responsive web applications from end to end.

My responsibilities included developing user-friendly front-end interfaces, implementing robust back-end logic, and integrating APIs to ensure smooth data flow and performance.

I worked primarily with technologies such as **HTML**, **Tailwind CSS**, **JavaScript**, **React**, and **Node.js**, along with **MongoDB** and **MySQL** for database management.

Through various projects, I gained hands-on experience with version control (Git/GitHub), RESTful API design, and basic deployment processes using services like **Vercel**.

SKILLS	HTML & CSS	Express.js
	JavaScript	Restful APIs
	React	Git
	Next.js	MongoDB

TECHNICAL PROJECTS

Car Rental Website - Karpadu

Developed the frontend of a modern car rental platform using Next.js and Tailwind CSS.

Implemented responsive UI components, optimized performance and SEO, and collaborated with backend developers to integrate dynamic APIs.

Focused on delivering a seamless, mobile-friendly booking experience and maintaining clean, scalable code aligned with modern React best practices.

ECommerce App

Technologies Used: React, Express.js, MongoDB, Redis, Stripe, JWT, Tailwind CSS Included safe, real-time payment integration and classified product displays into a contemporary e-commerce website.

The frontend, created with React and styled with Tailwind CSS, offers a responsive and user-friendly interface.

With the help of Express.js and MongoDB, the backend manages data storage and application logic effectively and scalably. JWT-based authentication and authorization were put into place to protect user information and transactions.

Stripe integration allows for safe, real-time payment processing and a seamless checkout procedure.

A user-friendly shopping cart, a secure payment procedure, and an easy-to-use product classification system are some of the key characteristics of the application.

Authendication App

Technologies Used: React, Express.js, MongoDB, JWT, Tailwind CSS Created a safe and feature-rich authentication application that allows users to sign up, log in, and manage their accounts while utilizing strong security measures.

The application's frontend, built using React and styled with Tailwind CSS, provides a responsive and straightforward user experience.

The backend, driven by Express.js, includes MongoDB for dependable data management and JWT for secure token-based authentication.

A signup flow with email verification, a login system with route protection, password recovery via forget and reset password endpoints, and a streamlined dashboard experience for authenticated users are among the key features.

Additional features include the implementation of backend email templates for account verification and welcome messages, as well as logout endpoints and authentication status checks.
