WORK EXPERIENCE	
Jan 2024 — Present	Full stack Developer - Freelancer Frontend Development (React): Build new components or update existing ones. Ensure components are reusable and maintainable by following best practices like hooks. Debug issues in the UI, including styling, state management, or API integration. Backend Development (Express.js): Develop RESTful APIs for the application, handling requests, responses, and middleware. Implement business logic and database queries. Debug backend issues, such as performance bottlenecks or API errors. API Integration: Integrate frontend components with backend APIs. Test API endpoints using tools like Postman or URL. Ensure proper error handling and feedback for the user.
May 2022 — Jul 2023	IT Support, Xalkiadakis A.E Heraklion 1. User Support & Issue Resolution Responding to IT support requests via phone, email, chat, or ticketing systems. Diagnosing and resolving hardware, software, and network issues. Assisting users with login problems, password resets, and account access. Providing guidance on software applications and system usage. 2. Hardware & Software Troubleshooting Installing, configuring, and updating software applications. Setting up and maintaining company devices like desktops, laptops, and printers. Troubleshooting connectivity issues with Wi-Fi, VPN, and network drives. 3. Ticket Management & Documentation Logging and tracking user issues using a helpdesk ticketing system. Escalating complex problems to higher-level IT specialists when needed.

EDUCATION

Oct 2018 — Dec 2024

Computer Science, University of Crete (CSD)

Heraklion

SKILLS

HTML & CSS

Express.js

JavaScript

Restful APIs

React

Git

Next.js

MongoDB

LANGUAGES

English

Very good command

Greek

Native speaker

TECHNICAL PROJECTS

E-Commerce App

Technologies Used: React, Express.js, MongoDB, Redis, Stripe, JWT, Tailwind CSS Included safe, real-time payment integration and classified product displays into a contemporary e-commerce website.

The frontend, created with React and styled with Tailwind CSS, offers a responsive and user-friendly interface.

With the help of Express.js and MongoDB, the backend manages data storage and application logic effectively and scalably. JWT-based authentication and authorization were put into place to protect user information and transactions.

Stripe integration allows for safe, real-time payment processing and a seamless checkout procedure.

A user-friendly shopping cart, a secure payment procedure, and an easy-to-use product classification system are some of the key characteristics of the application.

Authendication App

Technologies Used: React, Express.js, MongoDB, JWT, Tailwind CSS Created a safe and feature-rich authentication application that allows users to sign up, log in, and manage their accounts while utilizing strong security measures.

The application's frontend, built using React and styled with Tailwind CSS, provides a responsive and straightforward user experience.

The backend, driven by Express.js, includes MongoDB for dependable data management and JWT for secure token-based authentication.

A signup flow with email verification, a login system with route protection, password recovery via forget and reset password endpoints, and a streamlined dashboard experience for authenticated users are among the key features.

Additional features include the implementation of backend email templates for account verification and welcome messages, as well as logout endpoints and authentication status checks.
